

BIOLOGICAL CORRIDORS. TERRANOBLE 'S COMMITMENT WITH BIODIVERSITY

"To enchant and captivate with authentic wines reflection of our pioneer spirit and the nobility of our land, respecting people and the surrounding nature, is TerraNoble 's purpose.

In addition to ensuring the quality of the grapes that give origin to our wines, promoting biodiversity in the vineyards is also part of our viticulture team task. For this purpose, we are dedicated to developing biological corridors through which we aim to enhance the natural growth of native flora and fauna.

These biological corridors attract and stimulate pests natural enemies which combined with the use of natural and biological insecticides, allow our noble land to express itself and deliver grapes that faithfully speak of the terroir they come from."

Planting biological Corridors in our emblematic vineyard in the Maule Valley
